Omnicell®

XT Anesthesia Workstation

Strengthen Safety and Accountability in the OR

The operating room can be a stressful and dynamic environment. Anesthesia providers must stay laser-focused on clinical tasks, yet pharmacy needs strict oversight of controlled substances. The Omnicell® XT Anesthesia Workstation™[1] tackles the unique medication management challenges posed in the OR and perioperative settings.

XT Anesthesia Workstation provides security and visibility of controlled substances while ensuring safe, convenient medication workflow. Far more than a medication storage cabinet, it is an end-to-end solution that delivers effective oversight in high-diversion areas.

Controlled substances are tracked from the time they're stocked in the XT Anesthesia Workstation to when they're administered and wasted.

By automating manual tracking and closing gaps in inventory visibility, the XT Anesthesia Workstation moves you closer to the Autonomous Pharmacy.

Gain More Insight in Less Time

Intuitive anesthesia workflows on the cabinet are designed to reduce administrative tasks during procedures — allowing providers to focus on patient care and safety.

- Waste multiple meds with minimal clicks
- Flexibility to waste at any time vs. end of procedure
- Easily transfer dispensed meds to other providers and patients
- Enhanced workflow reduces time at cabinet by 20%[2]

Pharmacy dashboards track unreconciled wastes and allow for quick and easy auditing and investigation of controlled substance transactions.

- Real-time access to web-based operational dashboards
- Simplified electronic audit trails
- Tighter chain of custody

1. XT Anesthesia Workstation is a Class 1 FDA Device.
2. Omnicell customer data.

Integrated System Saves Time and Expands Capabilities

The XT Anesthesia Workstation operates from the same OmniCenter® server as Omnicell Automated Dispensing Cabinets and other Omnicell central pharmacy systems. This integration minimizes IT complexity and system maintenance. The data is also captured in our Omnicell One™ intelligence solution, which includes advanced diversion monitoring.

Pharmacy Peace of Mind

Increase your visibility to OR medication inventory and heighten patient safety.

- Keeps controlled substances secure at all times
- Barcode confirmation ensures accurate restocking
- Syringe Label Printer with barcoded labels strengthens safety and facilitates 340B program compliance
- Streamlines the investigating and auditing processes

Anesthesia-Friendly Features

Get the convenience of having controlled substances, medications, and supplies all in one place along with safeguards that help reduce errors that put patients at risk.

- Fast and secure fingerprint access
- Guiding Lights speed up medication removal
- Unique breakaway bar for emergency access to medications
- Versatile drawer types for medication visibility and security
- High capacity storage to help prevent stockouts

Closed Loop Reconciliation

Available for Epic EHR users, our closed loop functionality automates the process for reconciling controlled substances used, wasted, or transferred to another provider – saving time for anesthesia providers and pharmacy alike.

- Medication administration in EHR automatically appears in Anesthesia Workstation – no need to document twice
- No action needed for zero waste, which typically accounts for 80% of dispenses
- Increase waste compliance with simplified workflow
- View 100% of transactions in real time
- Reduce time spent resolving discrepancies – streamline investigating and auditing processes
